

When you work with Super Trees you will have a lot of bend and crooked tree armatures in the box.

To straighten them just apply a soldering iron to the bend and straighten it

I put a cloth pin at the bottom to add a little weight

Applying heat to the outside works better; apply slight pressure to straighten the bend

To continue the super trees build: dip them for a few minutes into a 1:1 mix scenic cement : water

Hang to dry

Super trees have very skinny trunks

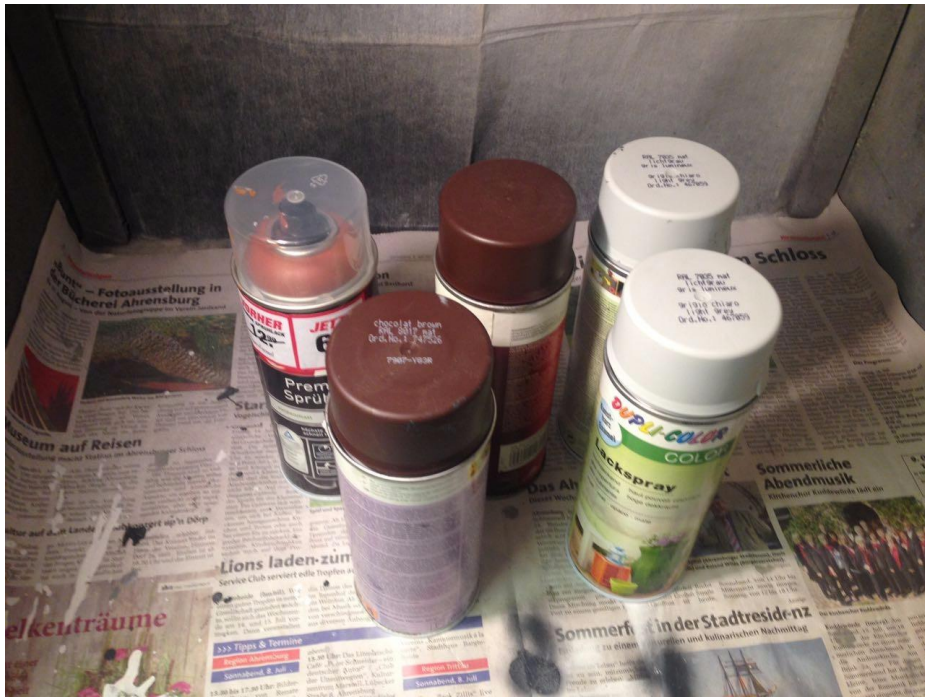

I add a little dab of construction adhesive to the trunk...

I use a metal spatula to form the adhesive into a plausible trunk shape. Neatness is not required, it just need to look like a thicker trunk

You can make the trunk thicker at the bottom to represent the start of the roots.

Let it dry. Next stop is paint....

Cheap rattle-cans. I look for bargains in light grey, brown and dark greys...

Fire at will: grey at bottom, brown overspray on top

I use a dark grey overspray on some trunks

Let dry

Super Trees: now the fun begins. Let's add some greenery....

I use Noch and Scenic Express Leaves .

The Noch leaves are finer, so most larger trees get a first sprinkling of Scenic Express with a second layer of Noch.

I mix the Noch colors: you get 4 different shades in one package: I add about 1/3 of the next darker color to give the trees some additional texture.

I use Uhu spray adhesive. I tested 5 different brands, and this Uhu (black top, "3 in 1" label) sprays the finest mist.

Spray adhesive

Drying time (again, but for the last time)

Enjoy your Forrest... This is the content of 2 Super Tree boxes

The Box only includes the weeds.

I have added:

Construction Adhesive

Cheap spray cans

Spray glue

Leave material, Noch and Scenic Express
